SmartKit Console

The Flexible Control Solution

SmartKit Console is a Hand-held or countertop device with many applications. It can accept multiple cash card schemes and can store related transaction records. Reports can be retrieved using reporting software run on a desktop or laptop computer.

SK Console is designed to be used with devices that have no room to place card reading equipment inside their enclosure. The Console is currently used as a cashier-operated hand-held POS terminal and card reload station, and provides automated self serve purchasing for photocopiers, fitness machines and other custom services. Machine control can be exerted by serial data communications or by direct contact I/O. Nearly any I/O requirement can be configured.

SK Console can also be used to accept smart cards as secure ID badges. Applications include controlling physical access, restricted goods dispensers (such as controlled cigarette and pharmaceutical dispensing) and providing restricted services. With the included numeric keypad, an added level of personnel ID confirmation by PIN entry is also possible.

The Console is normally housed in a tough ABS plastic enclosure and affixed to the top or front surface of the target machine. The Console can be mounted almost anywhere. Special mounting bracketry can be provided and, if necessary, the Console computer can be repackaged in a more appropriate enclosure for specific applications.

The Console typically draws power from the target machine through the interface cable. The nominal requirement is 200mA at 24VDC. A DC source from 18 to 36 Volts is suitable. If suitable power is not available from the machine, a calculator type supply is available.
